### DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 1/29 has been entered.

Claims 1-25 presented for examination. On 1/29/09, applicant filed an amendment, amending claims 1,9 and 22-25. After careful consideration of the applicants arguments and amendments, the examiner finds them to be moot in view of new grounds of rejection as a result of applicant's amendments to the independent claims.

## Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-8,22-25 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. Independent claim 1, recites an apparatus with processor and memory executable by said processor with computer code. However, the claim continues on to claim the "method comprising" The claims do not clearly distinguish themselves as methods which would require the use of hardware within the body of the claims or, apparatus claims which are based on hardware. The applicant is

Art Unit: 3691

requested to claim either a computer implemented method or computer based apparatus.

### Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

 Claims 1,3,5-14,16-19 rejected under 35 U.S.C. 103(a) as being unpatentable over Weichert in view of US Patent Application Publication to Topping 20040151353 and US Patent Publication 20050021400 to Postrel.

As per claim 1, Weichert discloses;

establishing a first transaction account and a second transaction account, wherein said first and second transaction accounts are associated with first and second transaction account identifiers, respectively; (0029)

associating said first and second transaction account identifiers with a common account identifier; (0004, 0032, and 0106)

receiving, at a transaction processing system, said common account identifier; (0029-0032) recognizing said common account identifier as being associated with more than one account; (0029-032)

Art Unit: 3691

determining, based on selection criteria, at least one of said first and second transaction accounts to access for processing <u>a</u> transaction, resulting in a selected transaction account; (0029-32)

accessing said selected transaction account based on said determining step; and (0029-32)

processing the transaction via said selected transaction account. (0032) biometric identification and pin numbers for multiple account access. (0072) Weichert does not explicitly disclose;

wherein said selection criteria include at least one of a plurality of biometric input identifiers respectively corresponding to said first and second transaction accounts, and a plurality of personal identification numbers respectively corresponding to said first and second transaction accounts, wherein said selection criteria further include said first transaction account being selected by default based on a type of merchant associated with said transaction:

(in summary, Weichert does not explicitly disclose direct association of one biometric with one account and a second with a second account in parallel with 2 pin numbers, Topping is being introduced to disclose the multiple biometric functionality.)

Topping teaches; the concept of linking biometric indicators to specific functions on a computer, one for internet, one for system access (0032) and further an example where each TV channel could be allocated to a different fingerprint (biometric). (0034)

Art Unit: 3691

It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to combine the disclosures of Weichert with the biometric teachings of Topping for the motivation of adapting fingerprinting technology (0004) to security.

Weichert and Topping do not explicitly disclose;

wherein said selection criteria further include said first transaction account being selected by default based on a type of merchant associated with said transaction:

Postrel teaches:

wherein said selection criteria further include said first transaction account being selected by default based on a type of merchant associated with said transaction: (0032)

It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to combine the payment management system of Weichert with the multifunction card system of Postrel where default accounts can be defined such that a particular account can be used at a particular merchant by default for the motivation of maximizing the advantages of particular accounts. (0002)

As per claim 3, Weichert discloses; the step of replacing said common account identifier with one of said first and second transaction account identifier associated with said selected transaction account during at least one of the accessing and processing steps. (0032, Weichert allows the use of either a common account number or can work with

Art Unit: 3691

the account number of one account)

As per claim 5, Weichert discloses said common account identifier is identical to at least one of said first and second transaction account identifiers. (0071) (various methods are disclosed, including where a user card could also be the id

mechanism which triggers the ability to select other accounts).

As per claim 6, Weichert discloses a user associating a common account identifier with said first and second transaction accounts. (032, 036-7, user can configure accounts as desired)

As per claim 7, Weichert discloses; selection criteria may be modified by a user of said first and second transaction accounts. (029-32, various methods of selection are disclosed)

As per claim 8, Weichert discloses; a settlement process comprising the steps of: processing a request for payment to said merchant when said merchant submits a settlement record (067)associated with said common account identifier; (032) recording transactions processed as settlement records in a settlement table; and paying said merchant. (067)

As per claim 9, Weichert discloses;

Art Unit: 3691

<u>Establish</u> a first transaction account associated with a first transaction account identifier; (0030)

Establish a second transaction account associated with a second transaction account identifier, wherein said first (0030) and second transaction accounts are associated with a common account identifier; and (0030)

determine, based on selection criteria in substantially real time, which one of said first and (0030)

said second transaction accounts to access during a financial transaction(0030)

Weichert does not explicitly disclose:

wherein said selection criteria include at least one of a plurality of biometric identifiers respectively corresponding to said first and second transaction accounts, wherein said selection criteria further includes said first transaction account being selected by default based on a type of merchant associated with said transaction, and a plurality of personal identification numbers respectively corresponding to said first and second transaction accounts.

# Topping teaches;

wherein said selection criteria include at least one of a plurality of biometric identifiers respectively corresponding to said first and second transaction accounts, and a plurality of personal identification numbers respectively corresponding to said first and second transaction accounts. (0032, 0034)

Art Unit: 3691

It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to combine the disclosures of Weichert with the biometric teachings of Topping for the motivation of adapting fingerprinting technology (0004) to security.

Weichert and Topping do not explicitly disclose;

wherein said selection criteria further include said first transaction account being selected by default based on a type of merchant associated with said transaction:

Postrel teaches:

wherein said selection criteria further include said first transaction account being selected by default based on a type of merchant associated with said transaction: (0032)

It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to combine the payment management system of Weichert with the multifunction card system of Postrel where default accounts can be defined such that a particular account can be used at a particular merchant by default for the motivation of maximizing the advantages of particular accounts. (0002)

As per claim 10, Weichert discloses; first and second transaction accounts each includes at least one of a credit account, debit account, loyalty account, phone card account and a stored value account. (041, credit and debit, claim 9 stored value)

Art Unit: 3691

As per Claim 11, Weichert discloses; said first and second transaction accounts each includes at least one of a credit account, debit account, loyalty account, phone card account and a stored value account, and wherein one of said first and second transaction accounts is represented by a physical instrument having associated therewith indicia representing said common account identifier. (0041,0071)

As per claim 12, Weichert discloses; wherein the common account identifier is the first transaction account identifier. (032, enabler stores a number of payment accounts, including the payment account)

As per claim 13, Weichert discloses; the common account identifier is the first transaction account identifier, and wherein said first transaction account includes a credit account. (0032, 0041, credit debit)

As per claim 14, Weichert discloses; at least one of said first transaction account identifier, said second transaction account identifier and said common account identifier is associated with a transaction card. (transaction card (032)

As per claim 16, Weichert discloses; said selection criteria <u>include</u> at least one of transaction specific input based criteria and default criteria. (029-32), default – (029), specific, (030-31)

Art Unit: 3691

As per claim 17, Weichert discloses; selection criteria <u>include</u> at least one of transaction specific input based criteria and default criteria, (030-criteria) and wherein said transaction specific input based criteria <u>include</u> at least one, of prompts at an ATM, and prompts at a <u>point of sale terminal</u> (pos). (032, POS, prompts)

As per claim 18, Weichert discloses; selection criteria comprise at least one of transaction specific input based criteria and default criteria, and wherein said default criteria comprise at least one of owner selected rules and card provider rules. (0110, user rules,0108-defualt criteria, determine if balance is sufficient)

As per claim 19, Weichert discloses; [Claim 1 9] The system of claim 9, wherein said selection criteria <u>include</u> at least one of transaction specific input based criteria and default criteria, and wherein said default criteria <u>include</u> at least one of minimum fund amount rules, maximum fund amount rules, type of transaction rules, and type of merchant rules. (minimum balance rules 0107)

 Claims 2, 4,15,20-25 rejected under 35 U.S.C. 103(a) as being unpatentable over Weichert in view of Topping, and US Patent Publication 20050021400 to Postrel and further in view of US Patent Application Publication to Blagg, 2004/0049452

Art Unit: 3691

As per claim 2; Weichert discloses; comprising the step of sending one bill to an account holder associated with said common account identifier, (0058 Weichert, billing) Weichert (058), Topping and Postrel, do not explicitly disclose consolidated billing. Blagg teaches wherein said bill reporting information relates to both of said first and second transaction accounts. (0068) in a multiple credit line presentation instrument. It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to combine the billing disclosures of Weichert with the consolidated billing of Blagg for the motivation of simplifying the life of a user while facilitating the use of multiple accounts with the same card. (0004)

As per claim 4, Weichert discloses;

recognizing said common account identifier as being associated with more than one account; (0030-2)

determining, based on said selection criteria, at least one of said first and second transaction accounts to access for processing said transaction, resulting in a selected transaction account;(0030-1)

accessing said selected transaction account system based on said determining step(0030-1);

Weichert, Topping and Postrel do not explicitly disclose;

receiving a reconciliation file including said common account identifier and processing the reconciliation file via a system associated with said selected transaction account.

Art Unit: 3691

Blagg teaches capability to settle accounts as a group or separately (0073) and consolidated billing (068) which would include; receiving a reconciliation file including said common account identifier; processing the reconciliation file via a system associated with said selected transaction account. (0073) It would therefore have been obvious ton one of ordinary skill in the art at the time of the invention to combine the multiple account disclosures of Weichert with the separate or combined settlement of consolidated accounts of Blagg for the motivation of allowing account holders to enjoy the convenience of multiple accounts with one card or device. (0004)

As per claim 15, Weichert discloses;

first transaction account includes a credit account (0030-2), could be either debit or credit) and said second transaction account includes a stored value account, (0030-2) (could be either) and wherein one of said first and second transaction accounts is represented by a physical instrument (0106) having associated therewith indicia representing said common account identifier,

Weichert, Topping and Postrel do not explicitly disclose a first accounting being a credit card and the second account being shared value.

Blagg teaches a variety of combinations (0037) for the purpose of meeting customer needs. It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to combine the multi account disclosures of Weichert with the account choice teachings of Blagg for the motivation of user convenience, (0004)

Art Unit: 3691

As per claim 20, Weichert discloses; criteria comprise at least one of transaction specific input based criteria and default criteria, and Weichert (059, variety of different prioritization schemes) Weichert further discloses accessing a second account if the first account is inadequate (0029)

Weichert, Topping and Postrel do not explicitly disclose accessing a stored value card first and credit card second.

Blagg teaches;

a variety of payment methods and default criteria are anticipated (037,52, 55). It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to combine the multi account disclosures of Weichert with the multiple criteria of Blagg for motivation of customer convenience. (0004)

As per claim 21, Weichert, Blagg and Postrel do not explicitly disclose; a single billing statement is presented showing information about transactions on the credit card account and the stored value account.

Blagg teaches a single billing statement is presented showing information about transactions on the credit card account and the stored value account. It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to combine the disclosure of Weichert related to multiple accounts with the multiple billing of Blagg for the motivation of customer convenience. (0004)

Art Unit: 3691

As per claim 22, Weichert discloses;

receiving transaction request information from a cardholder via a remote terminal, wherein said request includes a common transaction account identifier; and (0004,0030,0106)

processing said common transaction account identifier to determine <u>based on selection</u>

<u>criteria</u> which cardholder transaction accounts are associated therewith, (0030-2)

Weichert does not explicitly disclose;

wherein only one of said card holder transaction accounts <u>includes</u> a credit card account.

and wherein said selection criteria include at least one of a plurality of biometric input identifiers respectively corresponding to a first <u>transaction amount</u> and <u>a</u> second transaction account, and a plurality of personal identification numbers respectively corresponding to said first and second transaction accounts, <u>wherein said selection</u> <u>criteria further include said first transaction account being selected by default based on a type of merchant associated with said transaction.</u>

Toppings teaches;

and wherein said selection criteria include at least one of a plurality of biometric input identifiers respectively corresponding to said first and second transaction accounts, and a plurality of personal identification numbers respectively corresponding to said first and second transaction accounts. (0032,34)

Art Unit: 3691

It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to combine the disclosures of Weichert with the biometric teachings of Topping for the motivation of adapting fingerprinting technology (0004) to security. Weichert and Topping do not explicitly disclose;

wherein only one of said card holder transaction accounts <u>includes</u> a credit card account. <u>wherein said selection criteria further include said first transaction account being selected by default based on a type of merchant associated with said transaction.</u>
Postrel teaches:

wherein said selection criteria further include said first transaction account being selected by default based on a type of merchant associated with said transaction.(032) It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to combine the payment management system of Weichert with the multifunction card system of Postrel where default accounts can be defined such that a particular account can be used at a particular merchant by default for the motivation of maximizing the advantages of particular accounts. (0002)

Weichert, Topping, and Postrel do not explicitly disclose;

wherein only one of said card holder transaction accounts <u>includes</u> a credit card account. Blagg teaches a variety of combinations of cards which would include the combination where (0037) wherein only one of said card holder transaction accounts comprise a credit card account. It would therefore have been obvious to one of ordinary skill in the art at the time of the invention to combine the multiple account linkage disclosures of Weichert with the variety of accounts of Blagg to create a linked account

Art Unit: 3691

where only one credit card was used for the motivation of convenience to the customer who might require only a specific set of choices such as 1 credit card and other cards(0004)

As per claim 23, Weichert discloses; 23] The process of claim 22, wherein another of said card holder transaction accounts <u>includes</u> a stored value account. (039-041)

As per claim 24, Weichert discloses;, wherein at least one of said cardholder transaction accounts is an external transaction account. (032 and 044, no limitations on types of accounts is disclosed)

As per claim 25, Weichert discloses; The process of claim 22, wherein said remote terminal is a card reader. (0049)

Application/Control Number: 10/711,290 Page 17

Art Unit: 3691

## Response to Arguments

Claims 1-25 presented for examination. On 1/29/09, applicant filed an amendment, amending claims 1,9 and 22-25. After careful consideration of the applicants arguments and amendments with respect to claims 1,9,22 are moot in view of new grounds of relection as a result of applicant's amendments to the independent claims.

In regards to the applicant's Arguments;

35 USC 101 – The examiner withdraws the grounds of rejection relative to claims 9-21. However, in view of applicant's amendments to independent claims 1, 22, the examiner introduces grounds of rejection under 35 USC 101 as, the claims are now not clearly method or apparatus as drafted.

35 USC 103 (A) – The examiner adds Postrel in view of the applicant's amendment which claims a default account associated with a merchant. The examiner notes that Blagg does have some default capability as well.

Art Unit: 3691

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to BRUCE I. EBERSMAN whose telephone number is (571)270-3442. The examiner can normally be reached on 630am-5pm, Monday-Thursday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Alexander Kalinowski can be reached on (571) 272-6771. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
